

# ScrapingAnt

## Overview

ScrapingAnt is a web scraping API with headless browser capabilities, proxies, and anti-bot bypass. It allows for extracting web page data into accessible LLM markdown.

This particular integration uses only Markdown extraction feature, but don't hesitate to [reach out to us](#) if you need more features provided by ScrapingAnt, but not yet implemented in this integration.

## Integration details

Class	Package	Local	Serializable	JS support
ScrapingAntLoader	langchain_community	✗	✗	✗

## Loader features

Source	Document Lazy Loading	Async Support
ScrapingAntLoader	✓	✗

## Setup

Install ScrapingAnt Python SDK and he required Langchain packages using pip:

```
pip install scrapingant-client langchain langchain-community
```

# Instantiation

```
from langchain_community.document_loaders import ScrapingAntLoader

scrapingant_loader = ScrapingAntLoader(
    ["https://scrapingant.com/", "https://example.com/"], # List of
    URLs to scrape
    api_key="<YOUR_SCRAPINGANT_TOKEN>", # Get your API key from
    https://scrapingant.com/
    continue_on_failure=True, # Ignore unprocessable web pages and
    log their exceptions
)
```

```

The ScrapingAntLoader also allows providing a dict -scraping config for customizing the scrape request. As it is based on the [ScrapingAnt Python SDK](#) you can pass any of the [common arguments](#) to the `scrape_config` parameter.

```

from langchain_community.document_loaders import ScrapingAntLoader

scrapingant_config = {
    "browser": True, # Enable browser rendering with a cloud browser
    "proxy_type": "datacenter", # Select a proxy type (datacenter or
    residential)
    "proxy_country": "us", # Select a proxy location
}

scrapingant_additional_config_loader = ScrapingAntLoader(
    ["https://scrapingant.com/"],
    api_key="<YOUR_SCRAPINGANT_TOKEN>", # Get your API key from
    https://scrapingant.com/
    continue_on_failure=True, # Ignore unprocessable web pages and
    log their exceptions
    scrape_config=scrapingant_config, # Pass the scrape_config object
)

```

```

## Load

Use the `load` method to scrape the web pages and get the extracted markdown content.

```
# Load documents from URLs as markdown
documents = scrapingant_loader.load()

print(documents)
```

## Lazy Load

Use the 'lazy\_load' method to scrape the web pages and get the extracted markdown content lazily.

```
# Lazy load documents from URLs as markdown
lazy_documents = scrapingant_loader.lazy_load()

for document in lazy_documents:
    print(document)
```

## API reference

This loader is based on the [ScrapingAnt Python SDK](#). For more configuration options, see the [common arguments](#)
